Hazard statements in full

Our lab have developed a method of inhibiting the metabolisation of monoethylene glycol in the liver by the addition of our patented DeTox™ additive, thus preventing the release of the toxic metabolites - glycolic and oxalic acid - into the body. A test study by an EPA certified laboratory has determined that by the occurrence of synergistic and antagonistic effects, the addition of the DeTox™ additive to monoethylene glycol detoxifies it, resulting in a mixture with an LD50, oral, rat >15,000 mg/kg bw.

This product is Non-Toxic and readily biodegradable (90% over 10 days).
